

Appln No. 10/760,261
Amdt. Dated April 26, 2006
Response to Office Action of March 27, 2006

2

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A printing fluid dispenser including:
 - a housing comprising first and second portions movable relative to each other; and
 - a reservoir for storing printing fluid having an outlet arranged to dispense the stored printing fluid to a point external to the housing in response to relative movement of the first and second portions; wherein
 - the first and second portions include locking features arranged to prevent disengagement of said portions relative to each other subsequent to said dispensing, the locking features being configured to allow disengagement only upon cooperation with an unlocking tool.
2. (Original) A printing fluid dispenser according to claim 1, wherein the reservoir comprises a deformable container located within the housing and wherein bringing the first and second portions towards each other causes compression of said container.
3. (Original) A printing fluid dispenser according to claim 1, wherein the first and second portions comprise a base and plunger.
4. (Original) A printing fluid dispenser according to claim 3, wherein the locking features comprise one or more complementary protrusions and indentations formed into opposing walls of the base and plunger.
5. (Currently Amended) A printing fluid dispenser including:
 - a deformable container storing printing fluid;
 - a housing locating the deformable container between a base slidably engaging a plunger; and
 - an outlet coupled to the deformable container and arranged to dispense the stored printing fluid to a point external to the housing in response to relative sliding of the base and plunger; wherein
 - the base and plunger engage each other by means of one or more complementary protrusions and indentations formed into opposing walls of the base and plunger and positioned to prevent disengagement of the plunger from the base subsequent to said dispensing, the complementary protrusions and indentations being configured to allow disengagement only upon cooperation with an unlocking tool.
